

OSHA 10 for Supply Chain Management

Obtain your OSHA 10 Certification Card!

Supply Chain Management (SCM) enhances efficiency, reduces costs, and improves customer satisfaction by optimizing the flow of goods from raw materials to final delivery. It supports competitive advantages, risk management, product availability, and sustainability by coordinating activities within and across organizations.

OSHA training helps reduce risks that disrupt supply chain operations. By focusing on hazard recognition and prevention, it equips workers to address safety challenges before accidents happen.

What trainees will learn:

- **Powered Industrial Trucks (Forklifts):** OSHA guidelines for safe operation of PIVs (Powered Industrial Vehicles Aka Forklifts).
- **Hazard Communication (HazCom):** Training on understanding and labeling of hazardous materials (chemicals).
- **Materials Handling:** Safe transportation and storage of pressurized and hazardous substances
- **Ergonomics & Lifting:** Proper techniques to reduce injuries in both warehouse and office.
- **Lockout/Tagout (LOTO):** Procedures for ensuring safety during machinery maintenance.
- **Fall Protection:** Essential for warehouse racking and elevated work areas.
- **Additional OSHA approved training includes:**
 - Introduction to OSHA Basics and details
 - Exit Routes, EAP, Fire Prevention Plans, and Fire Protection
 - Personal Protective Equipment and Noise
 - Electrical Hazards including Batteries
 - Injury and Illness Prevention Program
 - Heat Illness Prevention
 - Machine Guarding
 - How to Pass an OSHA Inspection

How this training will benefit your company and employees:

Benefits include improved hazard recognition, safer handling practices, stronger compliance, and fewer disruptions across the supply chain.

Integrating safety early in supply chain decisions improves quality, consistency, and compliance. OSHA outreach training equips workers with certification and the skills needed to maintain a safer workplace.

This is especially important in environments like warehouses or distribution hubs where hazards are common.
