JANUARY 2020 ELLUCIAN PATCHES

With the exception of the College Calendar update, all of these Colleague screens are utilized while processing the MIS files each semester for the State Chancellor's Office.

CASX
Builds Student Enrollment Data
- Updating SX04 RD courses with no grades to correctly list RD.
- Updating SX02 with correct drop/withdrawal date if SX04 field is equivalent to a drop or withdrawal.

CASF (FA)
Builds Student Financial Aid Data
If the SSN is invalid, SB00 will be populated with D plus Colleague ID.

COLLEGE CALENDAR
Will only purge and rebuild records related to the Campus Calendar records included on a saved list when running with a saved list.

CAXB (XB)
Builds Section Data
Now contains a field to list reporting institutions.

CACT (Concatenation/Linking of XB, XE, XF)
Updated to a batch-style process. Will also have an option for CSV report.

CAXF (XF)
Builds Session Data
Creating one record for every section within a session rather than just one record total.

CACB (CB)
Builds Course Data
- Providing a short-tile option vs. the long-title only.
- Only creates a single CB record or a given reporting period when multiple courses exist with the same CB00 value. Data comes from active course for the reporting period.

CAXE (XE)
Builds Faculty Assignment Data
Process only builds one faculty assignment record per faculty member. With the update, it will now build a record for each faculty assignment for the given reporting period.
